5 Ways To Meet DOJ's Heightened Compliance Expectations

Jonny Frank

LAW360.COM

With billion-dollar penalties for misconduct almost becoming commonplace, it's no surprise the U.S. Department of Justice is raising the bar for compliance risk assessments — or that companies must focus more on identifying risks before they become issues.

At a recent conference of compliance officers, assistant attorney general for the Criminal Division, Leslie Caldwell, took aim at the compliance risk assessment process, commenting, "[C]ompliance programs are too often behind the curve, effectively guarding against yesterday's corporate problem but failing to identify and prevent tomorrow's scandals."[1]

> "COMPANIES FOCUSED SOLELY ON REGULATORY RISK OFTEN OVERLOOK OTHER SIGNIFICANT RISKS THAT CAN POSE CRIMINAL OR CIVIL LIABILITY."

When confronted with misconduct, counsel and compliance officers need to be prepared to answer whether the company had identified the violation as a potential risk. If the answer is no, the company must justify "why not;" and, if yes, explain why pre-incident policies and controls failed to prevent the misconduct.

Here are five practical ways to meet heightened expectations:

1. Regulatory Risk ≠ Compliance Risk

Caldwell aptly noted that compliance risk assessments need to reach beyond regulatory risk. Some companies, particularly those in regulated industries, differentiate between regulatory and compliance requirements — the former referring to specific industry regulations, and the latter referring to general legal requirements.

Compliance risk falls generally into four areas: **(1)** federal, state, local and foreign law; **(2)** industry-specific regulations; **(3)** contractual requirements; and **(4)** compliance with internal company policies. Companies focused solely on regulatory risk often overlook other significant risks that can pose criminal or civil liability, create financial loss, or damage reputation and important relationships.

2. COSO Integrated Internal Controls and Enterprise Risk Frameworks

When it comes to evaluating ethics and compliance programs, lawyers and compliance officers typically rely on the criteria in the U.S. Sentencing Guidelines, Chapter 8 Sentencing of Organizations (USSG).[2] Auditors prefer the standards issued by the Committee of Sponsoring Organizations of the Treadway Commission, referred to simply as COSO.[3] COSO is the leading risk management framework and the standard upon which most public

companies base their Sarbanes-Oxley assertion to the effectiveness of financial reporting controls.

Although the USSG speaks to assessing risk, it provides little direction on how to perform risk assessments. But COSO provides guidance.

At the risk of oversimplification, COSO defines "risk" as any event that impedes an organization to achieve its operational, reporting, strategic or compliance objectives. In doing so, COSO relies on schemes and scenarios. Take, for example, payments to public officials. Many lawyers would generally describe this as Foreign Corrupt Practices Act risk. Under the COSO approach, the organization enumerates potential schemes and scenarios by which the payments might be made. Input from forensic risks experts and experienced white collar lawyers is essential to this process, as they are in the best position to understand how such schemes are perpetrated within the context of the industry in which the company operates, its business model and its relationships.

3. Assessing Significance

A compliance risk assessment generally begins with identifying inherent risk, that is, without regard to mitigating controls. (Residual risk refers to the risk after taking mitigating controls into account). Inherent risk protects the risk assessment team from relying upon ineffective controls.

Next, the team measures significance to weed out inconsequential risks. It is at this step that companies encounter trouble. Noting that "corporations all too often misdirect their focus to the wrong type of risk," Caldwell explained that the DOJ has "repeatedly seen corporations target the risk of regulatory or law enforcement exposure of institutional and employee misconduct, rather than the risk of the misconduct itself."[4]

Stated differently, we often see companies measure significance by attempting to quantify the likely direct monetary penalty if they get caught. This approach is akin to assessing the significance of drunk driving to the likely penalty in the event of a police stop. Instead, companies should holistically assess significance, including the impact on potential victims, brand and reputation, and relationship with customers, suppliers, employees, etc.

Counsel and compliance officers serve an essential role. Companies often defer assessment to the business unit and functions leaders impacted by the risk. Business leaders, however, are not — and should not be — compliance experts. Their focus should be on improving and achieving operational efficiency. In doing so, however, they are vulnerable to missing the bigger picture, particularly, if the company measures them on profit and loss.

4. Overreliance and Underutilization of Other Risk Assessments

Companies perform all types of risk assessments. Internal audit assesses risk when developing its annual audit plan. Enterprise risk assessment identifies catastrophic risk. Operational risk assessment focuses on financial impact. Individual business units and functions commonly perform risk assessments to develop financial forecast and budgeting.

On their own, none of these factors qualify and it would be a mistake to rely upon them as a compliance risk assessment. That does not mean, however, that these assessments are unsuitable for a compliance risk assessment. Done properly, and with the inclusion of individuals knowledgeable about and skilled in compliance, the company and the industry in particular, they provide an opportunity to assess compliance risk without conducting a separate compliance risk assessment.

5. Document, Document, Document

Effective defense of the company's compliance risk assessment process — whether it be to the board compliance committee or prosecutors and

regulators — demands contemporaneous, written documentation. Verbal reconstruction of the assessment will not suffice. A variety of formats are available, although, most companies employ a simple Excel worksheet to track: **(1)** inherent risk; **(2)** impacted business units and functions; **(3)** reason for inclusion; **(4)** assessment of inherent significance and likelihood; **(5)** description of organization's risk response; **(6)** summary of procedures to evaluate design and validate operating effectiveness; and **(7)** a summary of additional planned procedures, if any.

Conclusion

Risk assessments form the cornerstone of an effective compliance program. If the five measures outlined above are implemented effectively and documented contemporaneously, a company stands a good chance of passing a post-incident prosecutorial assessment of its pre-incident compliance program.[5] Compliance risk assessments conducted poorly — or worse, not at all — can likely lead to criminal prosecution, enhanced fines and penalties, and possible imposition of a government compliance monitor.
